

In the specification

Please amend page 5, lines 19-23, as follows:

Thus, in a first cleaning action, paint can be removed from the roller by scraping the roller on the indent 26 of outlet flange 22 and by the act of inserting the roller 24 into the housing 12. Paint collected in this way is easily collected and returned to a tin or other storage device for reuse.

Please amend page 6, lines 13-20, as follows:

In the embodiment of the invention under consideration the device 10 is also provided with a pressure relief plug 34, as illustrated in detail in figures 4 and 5. The housing 12 is provided with a vent opening 36 close to the inlet 14. The relief plug ~~plug~~ 34 is attached around the spigot 18 and is, under normal conditions, used to close the vent opening 36. To ensure that the plug remains in position, it is provided with a slightly oversized end projection that fits over the vent opening 36 securing the plug 34 in position. In the case where a pressure build-up occurs within the housing 12, the plug 34 is released as shown in the dotted detail of figure 4.

Please amend page 6, lines 21-23, as follows:

In use, the device 10 of the invention is used in a first cleaning action to scrape any excess paint off the roller 24 using the indent ~~scraper~~ 26 and by the act of inserting the roller in 24 into the housing 12.
